## Inferences with *my SSR Book*

Inferring, or "reading between the lines", is an active type of thinking you should do while you read. Even though the author does not actually SAY it, you can figure out a "hidden" meaning based on some contextual clues provided by the author plus your own background knowledge (experience).

$$\text{CC} + \text{BK} = \text{I}$$

Contextual Clues	+	Background Knowledge	=	Inference
